

SYNTHETIC TEST DOCUMENT — OPERATING MANUAL EXTRACT

Golden E2E test corpus | Not an actual MRPL document

Section 4.2 — Normal operation

FV-201A is normally operated at 38.0 barg and 285 °C in the synthetic test scenario.

Section 4.3 — Pressure protection

Do not operate FV-201A above its design pressure of 45.0 barg. If pressure approaches the limit, follow the shutdown procedure.

Section 5.1 — Material compatibility

The equipment specification identifies the valve body material as 316L Stainless Steel.

Ground-truth note

This document intentionally repeats selected facts from the equipment specification so cross-document retrieval can be tested.
